
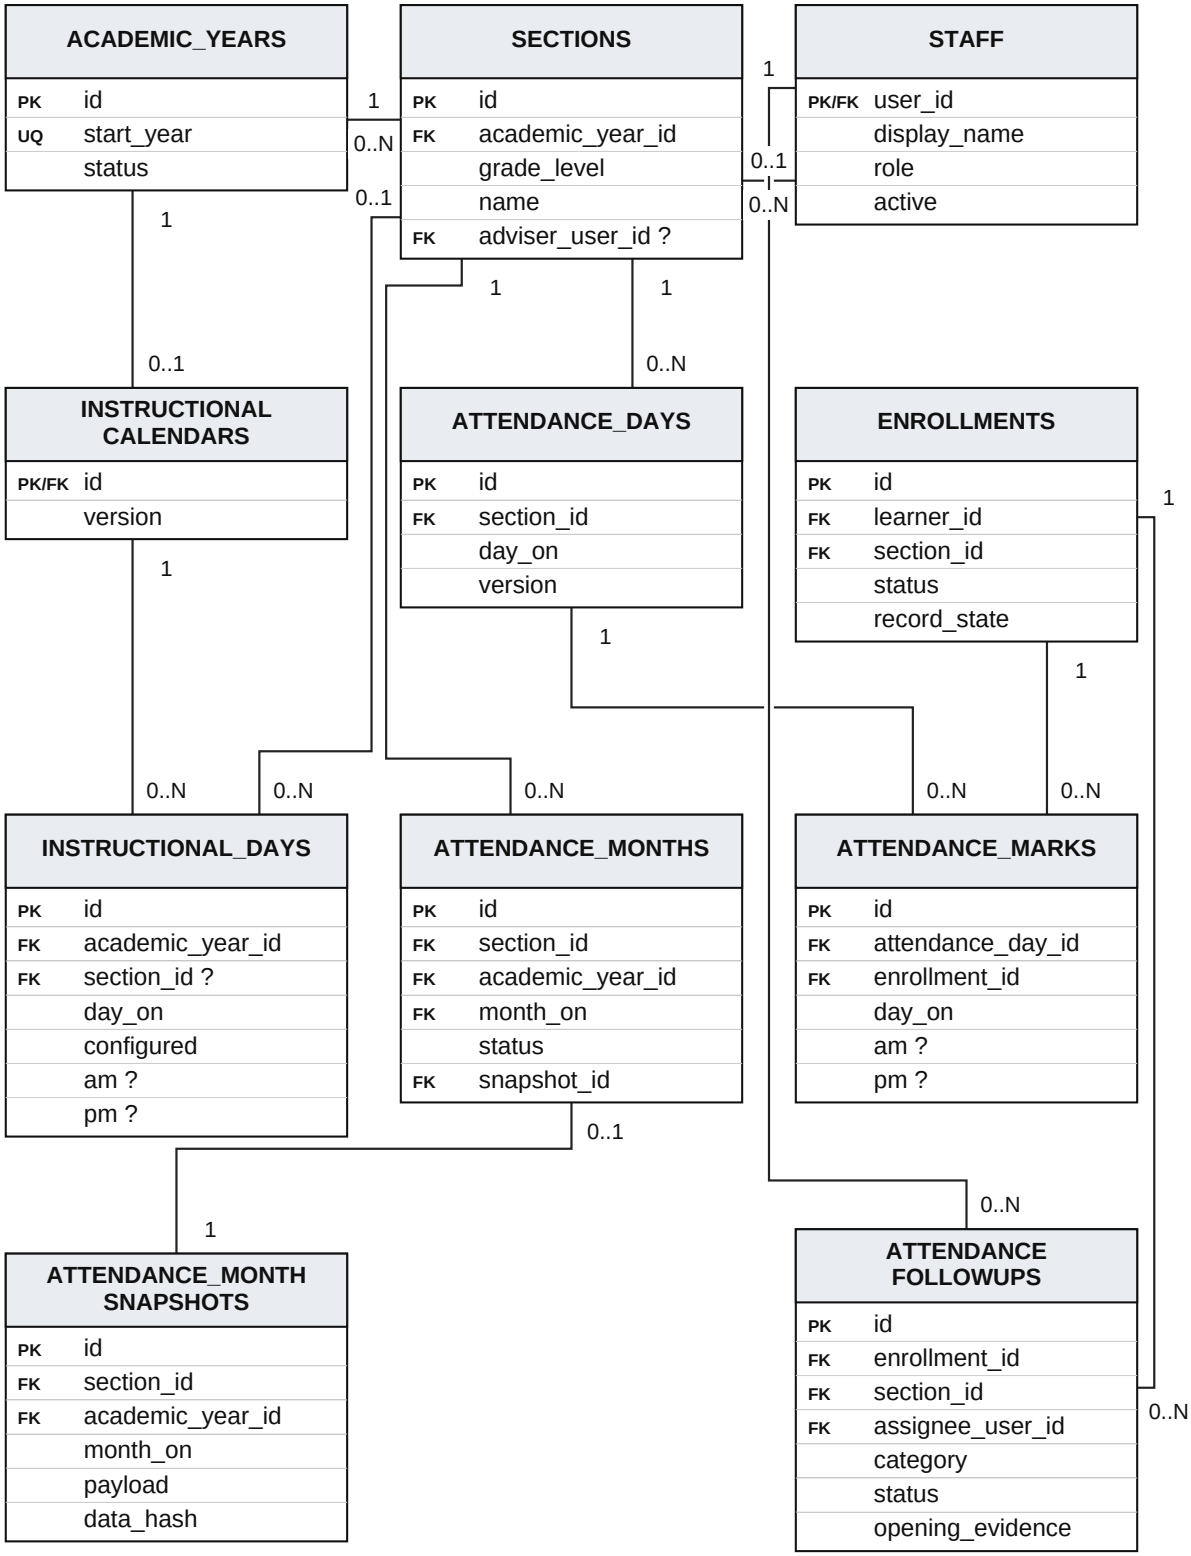
PK primary key FK foreign key UQ single-column unique key ? nullable
1 exactly one 0..1 optional one 0..N zero or many. Crossings do not join.
Selected attributes and relationships; context FKs and journals may be omitted.

Figure 7. Entity-Relationship Diagram for Class Preparation

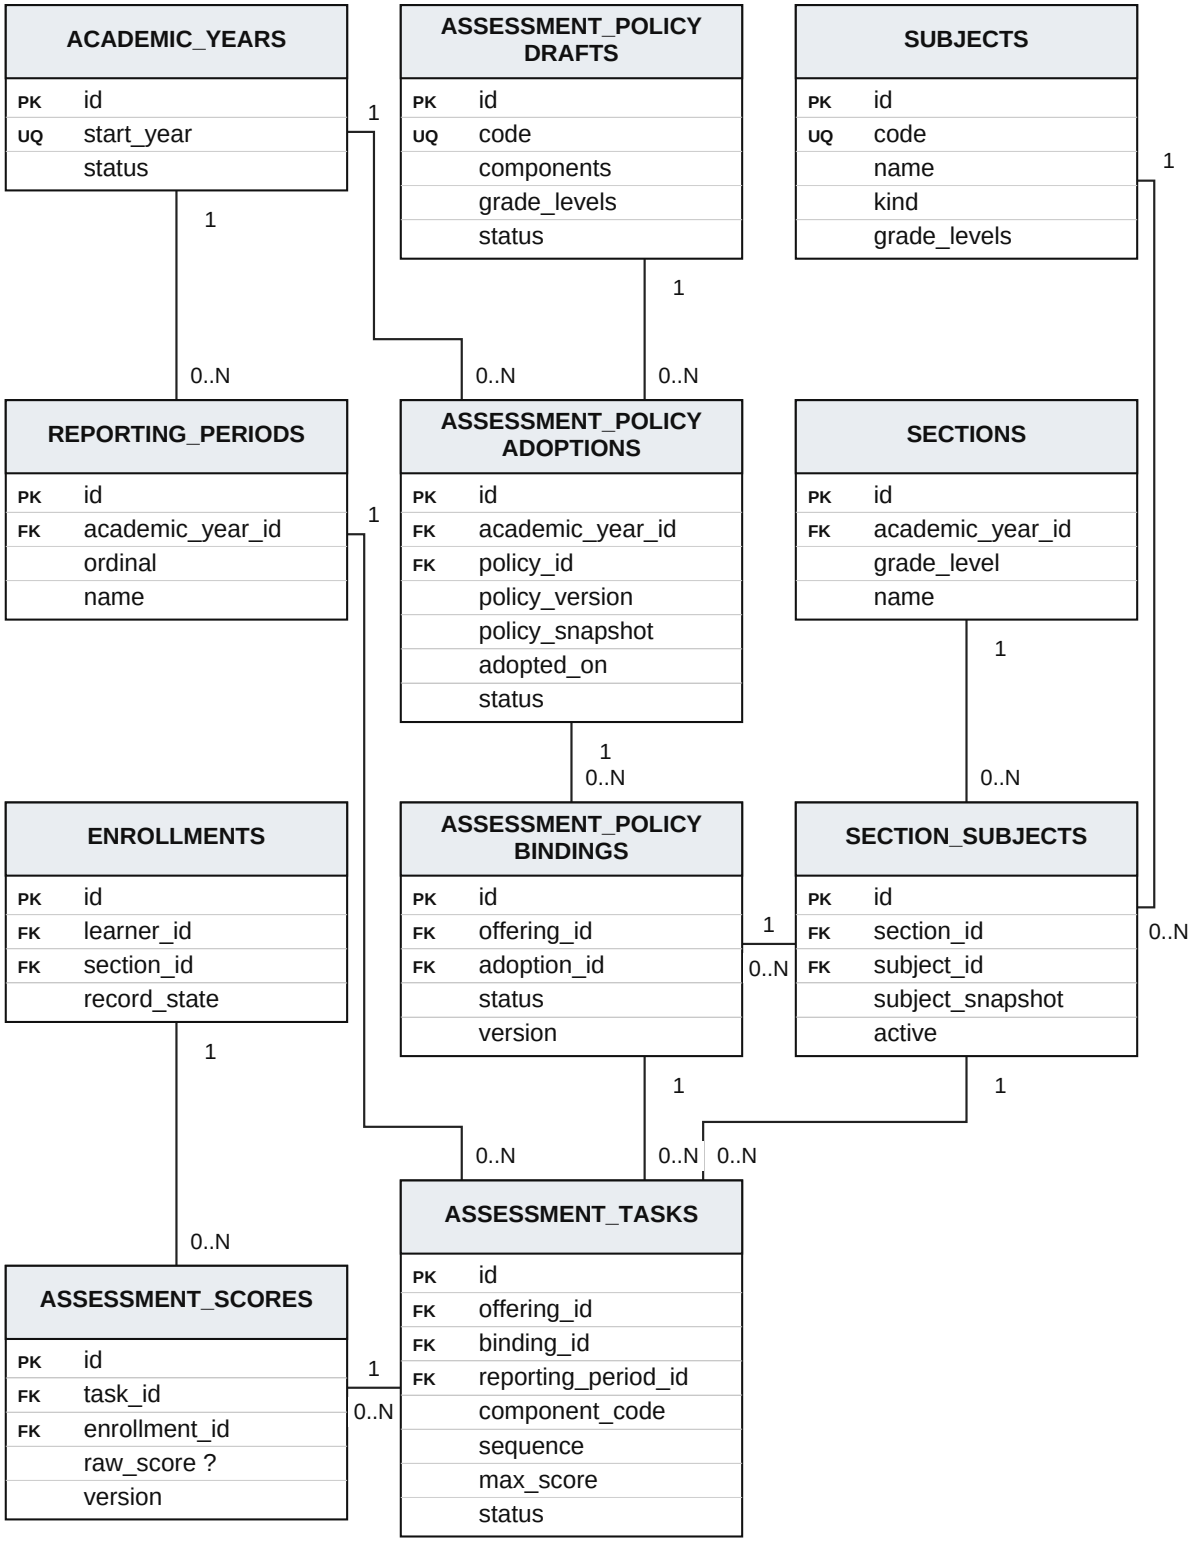
One valid enrollment per learner and school year; voided records remain as evidence.
Section placement also checks year and grade. An adviser may be unassigned.
Movement events are original history; correction and identity journals are omitted.



PK primary key FK foreign key UQ single-column unique key ? nullable
1 exactly one 0..1 optional one 0..N zero or many. Crossings do not join.
Selected attributes and relationships; context FKs and journals may be omitted.

Figure 8. Entity-Relationship Diagram for Attendance Record

No configured date means unknown; a null AM/PM mark means not recorded.
A saved month references one snapshot. Before first submission, its draft is virtual.
Follow-ups are manual. Official attendance credits and automatic alerts remain gated.



PK primary key FK foreign key UQ single-column unique key ? nullable
1 exactly one 0..1 optional one 0..N zero or many. Crossings do not join.
Selected attributes and relationships; context FKs and journals may be omitted.

Figure 9. Entity-Relationship Diagram for Academic Record

An offering may retain many bindings; at most one is currently bound.
Adoption and subject snapshots preserve the selected revisions.
Only raw scores are stored. Null is unrecorded; no grade is computed.
